Axis

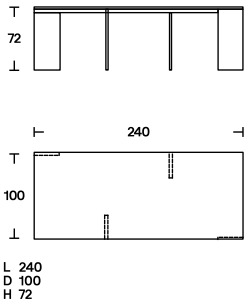

Year	2009
Designer	Gabriele & Oscar Buratti

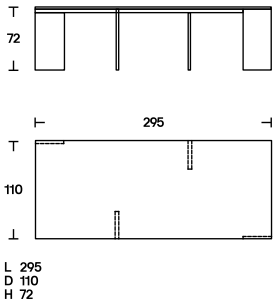

Axis table features an ultra-slim design, which continually surprises the eye with shapes that are light and airy from one angle, or purified and monumental from another — a marvel of optical illusion created with the simplistic and playful minimalism characteristic of designers Gabriele and Oscar Buratti.
The internationally-awarded duo has created a unique table with four slim legs unusually placed at 90-degree angles, resulting in optical effects ranging from near weightlessness to firm stability, while permitting flexible seating arrangements.
With the extra-thin top, Axis table is made of composite material veneered with precious woods, or in back-lacquered glass.
The top is supported by four legs in reflective polished stainless or brushed burnished steel, and placed onto opposite perpendicular axes.
