Link 1

Designer	Bruno Fattorini
Year	2016

Link 1 is a shelf that transcends traditional notions of pure aesthetics, combining functionality, simplicity, innovation, and design culture. With its clean and universal design, Link 1 seamlessly complements other pieces within the collection, meeting the needs of both living and sleeping areas. Its monomaterial finishes in wood or stone, as well as the monochromatic versions, make it equally perfect for contract environments. Link 1 is also available in an electrified version, equipped with a cable hole panel and a rear gap for the management and masking of cables.

Frame
Structure with load-bearing bracket (maximum capacity of 20 kg /m) made of steel powder-coated in aluminium grey.
Also available in electrified version, with cable management door and back interspace to make cables pass and be hidden.
Top made from medium-density fibreboard panels, coated with various finishes.

Wood
3 mm thick natural oak solid wood, with thermal bio-treatment got through the combined use of heat and steam, without adding any chemical additives.
Heat treatment transforms the features of the wood itself. The beauty of wood remains unaltered, heat treatment varies its colour without resorting to any chemical dyes, without using any harmful substances, taking on quite a natural and unique shade.

Reconstructed stone
Textured finish obtained from a blend of mineral powders that have been micronised and mixed with liquid acrylic and water-based products, giving it a material essence. The finishes are applied manually with a palette knife over the entire surface of the table, followed by a maturation process at room temperature. The material is subsequently protected with a water-based nanotechnological finish that makes the table sturdy and easy to clean. Top, edges and legs covered with the application of a thickness of about 1,5 mm of material.
Reconstructed stone note: visual irregularities, nuances, a lack of uniformity of both surface and material colour are deemed traits of value and uniqueness.

Solid surface
White solid surface, made of acrylic resin and rock minerals. Frame covered with a 3 mm thick sheet of resin.

Carbonised wood
Same characteristics as oak, but through a natural surface acid etching treatment, the distinctive “burning” appearance is achieved.
