

Take good care of it.

All products in "The Principle of Lightness" Collection are for indoor use.

In order to enhance the features of the raw materials (stainless steel and aluminium), the products in "The Principle of Lightness" collection do not use a protective paint, as it would change the colour of the metal, causing it to yellow over time. Although the surface is more delicate with no protective cover, it is also glossier and shinier, a feature to be preserved so as to enhance the exquisiteness of the objects, which can be considered contemporary artworks.

The unique nature of the product's surface finish and its unusual distortion and unevenness is shaped manually through brushing and sanding a synonym for care, professionalism and attention to every last detail of the finished product. Each item is one of a kind, with small imperfections to be seen as added value defining the product's uniqueness and originality in a limited series.

Everyday cleaning.

To clean properly, use water and a mild soap, rinse only with water and dry carefully with a soft microfiber cloth to avoid limescale deposits which could cause spots and incrustations.

Care, maintenance and repair of slight scratches.

Lofty

Steel

use the specific product (SIDOL*) and cloths provided.

*SIDOL removes dirt, patinas and slight surface scratches from all products in "The Principle of Lightness" collection. Deeper scratches cannot be removed.

Do not use scouring pads or steel wool which could scratch the surface and leave carbon steel deposits which, in the presence of humidity, could cause rust spots. Do not use strong detergents, especially ones that contain chlorides.

Le Banc, Minima, Tense

Aluminium

unlike steel, aluminium tends to tarnish over time, forming a slightly dark patina.

To restore the metal's lustre, use the specific product (SIDOL*) and cloths provided.
