Parioli

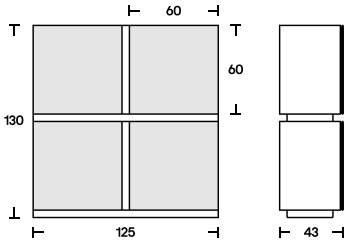

Year	1971– 2026
Designer	Lodovico Acerbis

Designed in 1971 by Lodovico Acerbis, Parioli was conceived as a modular system introducing an advanced idea of storage furniture. A distinctive feature of the project is its structure finished in satin stainless steel, which defines its architecture. Set slightly back from the storage units, the frame creates a refined play of depth. Today, Parioli is being reissued, faithful to the original design, in its vertical sideboard configuration, reaffirming its expressive strength. The structure frames the doors and internal partitions, enhancing the storage units available in dark-stained walnut or black-stained ash, paired with doors in the same finish or with a satin stainless steel finish. The option of choosing between compartments with doors and practical drawers allows the piece to meet a variety of functional needs.

and 1 large right-hand drawer

Finishes

Central structure in multilayer wood clad in stainless steel sheet and wooden containers in multilayer wood with black-stained ash or dark-stained walnut veneer. The doors and drawer fronts are made of multilayer wood with internal veneer in black-stained ash or dark-stained walnut. The bottom of the drawers is lined in dark grey saddle leather. The exterior is characterized by cladding in satin-finish steel sheet with anti-touch treatment, or in the same finish as the container in black-stained ash or dark-stained walnut.

The container with door includes, as standard, one extra-clear glass shelf, 6 mm thick. Optional internal drawer, which can be inserted in the module with drawers, veneered in black-stained ash or dark-stained walnut, with bottom lined in dark grey saddle leather.
The different types are available with or without internal lighting. Lighting with opening sensor only on the door.

The central cross-shaped structure and the base are always in satin-finish stainless steel.
