SK Table

Designer	Studio Klass
Year	2026

SK Table interprets elegance and technical sophistication through a calibrated balance, naturally combining lightness and precision. At the core of the project, the repetition of an iconic sign – composed of two aluminium arches joined at their ends – defines a distinctive visual rhythm, generating the table's very structure.
In the version with a round top, the elements forming the base converge into a central node, while in the rectangular barrel-shaped variant those same elements remain separate, creating an effect of suspension that heightens the perception of lightness. Joints and technical components are completely concealed, resulting in a measured and precise aesthetic. The range of finishes available for the tops – in oak veneer, marble and cast glass – allows the tables to fit naturally into a variety of settings, from residential interiors to hospitality and contract spaces, while always preserving the expressive strength of the design.

Wood top
Wood made of medium-density wood fibreboard in various finishes. The wooden versions stand out for their refined inlays which, in addition to lending originality to the models, follow the direction of the grain to define the profile of the edge. The latter is achieved through an exclusive pressing technique that enhances the natural beauty of the grain. The rectangular version features a distinctive barrel shape, while in the round version the inlay is arranged in segments. Thickness: 22 mm.

Glass top
Extra-clear cast glass, with a smooth upper surface and a hot-shaped lower surface, finished with a semi-transparent coating in bronzed or transparent tones. The edge is the natural result of the top's annealing process. This finish is available exclusively for the round version. Thickness: 12 mm.

Base
The structure is made of die-cast aluminium, liquid-painted in a matt finish, available in titanium, deep grey and champagne. The base is free from visible joints.

Marble top
Marble with a matt polyester-coated finish, available in various finishes. The edge is shaped with a profile that tapers downwards. Thickness: 20 mm.
